SECTION VI - HEALTH HAZARD DATA

Routes of entry: Inhalation? by mist Skin? yes Ingestion? yes

HEALTH HAZARDS (1. Acute and 2. Chronic)

1. Concentrate is harmful or fatal if swallowed. Concentrate was not considered to be a primary skin irritant per Federal Hazardous Substance Act; however, five out of six test subjects had crust formation by day seven. Concentrate was considered to be an eye irritant per FHSA. Neo-vascularization, an indication of corrosion, was observed in all six test subjects by day seven. Concentrate induced mortality in four of 10 test subjects at a dose of 5 g./kg. Inhalation - Overexposure may cause nose and throat irritation. Acute inhalation - 1 Hour Toxic Limit test - not toxic at nominal concentration of at least 44.69 mg/l (actual concentration 62.04 mg./L). This was the maximum concentration that could be generated by this test. 2. None known by Hillyard Industries.
